

THE HOSPITAL OS • INDIA

Run your entire hospital from one screen.

OPD queue, patient records, GST-ready billing and analytics in one platform, built for Indian clinics and hospitals. Every practice we onboard goes live ABDM-enabled.

THE PROBLEM

Five disconnected tools, and nothing reconciles.

Most clinics run on a diary for appointments, a register for records, a book for cash and a spreadsheet for everything else. Patients get entered five times, the money never quite adds up, no-shows leak revenue, and now ABDM is one more thing to figure out.

ONE PLATFORM

Everything your front desk and back office run on.

Live OPD queue

A token queue that keeps a busy front desk moving, with the visit, record and bill in one flow.

Patient records

History, notes and documents on one timeline, pulled up in a tap at registration or the consult room.

GST-ready billing

Bill of Supply for exempt OPD, Tax Invoice for taxable items, with the right document raised automatically.

Patient wallet

Take advances and part-payments, settle bills against them, and keep refunds bounded by what was paid.

Reach every patient

Reminders, token updates and receipts fire automatically over WhatsApp and SMS, plus IVR calling and missed-call lead capture to reach patients who don't live on apps.

Specialty trackers

A built-in myopia tracker for eye care, benchmarked against official reference data, plus custom clinical forms you build for any specialty, followed visit over visit.

Documents & analytics

Reports, scans and receipts attached to the record, and numbers that reconcile to the rupee.

Roles & multi-hospital

Role-based access per staff member, and several branches under one organisation with one owner view.

Machine integration

Connect your lab and diagnostic machines end to end, on demand, so readings and results flow straight into the patient record and bill, with no manual copying.

Open API & data import

A documented REST API and guided data import, so OlivHealth fits the tools you already run and your existing records come across at onboarding.

ABDM · INCLUDED AS STANDARD

Go live ABDM-enabled from day one.

India's health records are going digital under ABDM. Every hospital we onboard goes live ABDM-enabled as part of onboarding, not as an add-on you buy later.

ABHA at registration

Create and verify a patient's health ID right as you register them.

Records follow the patient

On the patient's consent, their records move with them across the health system.

No extra module

It's part of going live with OlivHealth, standard on every plan.

BUILT FOR YOUR KIND OF PRACTICE

One platform, tuned to how you work.

Clinics

Nursing homes

Multi-specialty hospitals

Polyclinics

Dental clinics

Ayurveda & Panchakarma

Eye hospitals

Physiotherapy & rehab

Pediatric clinics

ENT clinics

Dermatology & skin

Maternity, gynae & IVF

Each type of practice works differently. OlivHealth bends to your segment, from multi-sitting dental treatments to Panchakarma courses to a high-volume eye OPD.

ONBOARDING

Live in weeks, not years.

Step 01

Map & migrate

We import your existing patients, services and users, and configure OlivHealth to your workflows.

Step 02

Train & pilot

Your team onboards in guided sessions and runs a supervised pilot on one department first.

Step 03

Go live & scale

Roll out across departments and branches with hands-on support at every step.

India-hosted

Data residency in India

DPDP-aligned

Built for the DPDP Act

Role-based access

Right screen, right staff

Auditable trail

Every void & refund on record

TRUSTED BY HOSPITALS & CLINICS

Saraswati Eye Care Centre · Prem Eye & Maternity Hospital · and many more clinics across India

SIMPLE PRICING

Plans start at **₹35,990/year, or ₹3,499/month.**

Every plan is ABDM-enabled. Final pricing is quote-based, book a demo for a tailored quote.

See it on your own hospital's data.
